EXPERIENCE

Software Engineer II

Booking.com

Jan 2024 – Ongoing Amsterdam, Netherlands

- Reduced CSV processing time from 10 hours to 26 minutes for 500K-entry files, by architecting an event-driven system on AWS (Lambda, SQS, DynamoDB) to replace the legacy cron-based pipeline, with built-in monitoring and visibility
- Enabled multiple products and teams to onboard onto the pipeline independently within minutes, by designing a generic, config-driven (YAML) system with an AI-assisted onboarding prompt and a schema-driven frontend
- Enabled value-based steering, by providing insights into platform usage and product adoption, through designing and developing a system to track how partners manage pricing
- Improved system observability, resulting in faster issue detection and resolution, by building monitoring dashboards in Grafana using Terraform
- Improved code maintainability and time-to-market, by modernizing the legacy codebase, increasing test coverage, and refactoring inefficient partner-facing platforms

Software Engineer I

Booking.com

Aug 2022 – Dec 2023 Amsterdam, Netherlands

- Enhanced partner eligibility automation by replacing reliance on a static list with a cron job, improving accuracy and efficiency
- Designed and developed a system for a derived product using Kafka pipelines and existing services, empowering product adoption observability under the Value-Based Steering initiative

Senior Software Developer

Cuemath

Apr 2022 – Aug 2022 Bangalore, India

- Enhanced real-time communication between students and teachers, by enabling seamless audio/video calls and screen sharing, through the integration of third-party SDKs
- Improved data-driven decision-making, by providing insights through an analytics dashboard, by implementing frontend instrumentation and leveraging collected data

Software Developer

Cuemath

Sep 2020 – Mar 2022 Bangalore, India

- Provided students, teachers, and parents with insights into student performance, by generating comprehensive monthly progress reports, through the development of a reporting system

SKILLS

Java OOP Python TypeScript Javascript React
Flask MySQL DynamoDB Firebase AWS Lambda
SQS Terraform Cron Grafana Material-ui Antd

EDUCATION

M.Sc. in Computing Systems

Georgia Institute of Technology

Jan 2022 – Dec 2024

3.8 GPA

B.Tech. in Electronics and Communication

Punjab Engineering College

Aug 2016 – July 2020

8.1 CGPA

PROJECTS

Game Swap

Georgia Institute of Technology

3 months

- Built a platform for users to list, search, and swap games, with accept/reject flows, ratings, and swap history
- Technology Used:** React, Flask, MySql and Semantic-Ui

SwyftCart

9 months

- Built a full-stack e-commerce platform for browsing, cart, and checkout (online or cash-on-delivery) from nearby shops, with order tracking and cancellation
- Built a companion admin app for shops to manage inventory, order status, and view sales statistics
- Technologies Used:** ReactJS, Redux, Node.js, Express.js, Antd, Firebase

LANGUAGES

English, Hindi, and Punjabi
